

Written as the Flutter objects it becomes: a `ColorScheme`, a `TextTheme`, spacing constants, and component files with named parameters.

Step A — Palette as a `ColorScheme`

```
final scheme = ColorScheme.fromSeed(
  seedColor: const Color(0xFF6F4E37), // coffee brown, primary
  brightness: Brightness.light,
);
```

Role	Hex	Used for
primary	#6F4E37	Main buttons, active nav item, app bar
onPrimary	FFFFFF	Text/icons on primary-colored surfaces
secondary	#D9B08C	Highlights, secondary actions, badge fills
surface	FFFFFF	Cards, sheets, dialogs
onSurface	#2B1D14	Body text on cards/surfaces
error	#BA1A1A	Validation errors, delete actions
onError	FFFFFF	
background	#FBF6F2	Screen background

Water 200g, Coffee 33g — this is #2B1D14 body text on #FBF6F2 background.

Contrast ratio ≈ 13.9:1, well above the 4.5:1 minimum for body text.

Dark mode: none, only light mode for now. Dark mode is not in the release version for it is extra work, which is not good for a minimum viable product approach, especially if it is a personal app for 1 person. After all, dark mode is one extra `ColorScheme` (`brightness: Brightness.dark`) and a `darkTheme`: entry. Will be added later instead for it is not essential for the release version. Thankfully, adding dark mode later is a theme-file change and not a rewrite.

Step B — Type scale as a `TextTheme`

```
textTheme: const TextTheme(
  titleLarge: TextStyle(fontSize: 22, fontWeight: FontWeight.bold),
  bodyLarge: TextStyle(fontSize: 16, fontWeight: FontWeight.normal),
  labelSmall: TextStyle(fontSize: 12, fontWeight: FontWeight.normal, color: Color(0xFF8A6E5C)),
),
```

Calculator

`titleLarge`: 22sp · Bold — screen titles

Water 200g, Coffee 33g `bodyLarge`: 16sp · Regular — input labels, list text, recipe details

Saved 2 days ago `labelSmall`: 12sp · Regular — hints, timestamps, grind setting subtext

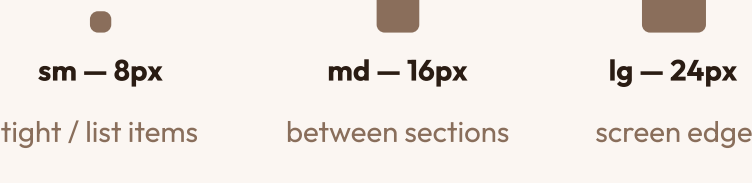

Style	Flutter slot	Size	Weight	Used for
Heading	<code>titleLarge</code>	22	Bold	Screen titles ("Calculator", "Notes")
Body	<code>bodyLarge</code>	16	Regular	Input labels, list text, recipe details
Caption	<code>labelSmall</code>	12	Regular	Hints, timestamps, grind subtext

```
Text('Calculator', style: Theme.of(context).textTheme.titleLarge)
```

Used by name everywhere — no `TextStyle(fontSize: 22)` written inline in any screen file.

Step C — Spacing as constants

```
class AppSpacing {
  static const double xs = 4;
  static const double sm = 8;
  static const double md = 16;
  static const double lg = 24;
}
```

Two cards at the standard section gap (16px):

Decision	Value
Base unit	8px (<code>AppSpacing.sm</code>)
Screen edge padding	24px (<code>AppSpacing.lg</code>)
Gap between list items	8px (<code>AppSpacing.sm</code>)
Gap between sections	16px (<code>AppSpacing.md</code>)

```
padding: const EdgeInsets.all(AppSpacing.md)
```

Step D — Components as files

Every piece that repeats across the wireframes and mockup, each taking data and callbacks — never `setState` — and `const` wherever the constructor allows it.

PrimaryButton

Save

`lib/widgets/primary_button.dart`
`String label, VoidCallback? onPressed`

OutlineButton

Start

`lib/widgets/outline_button.dart`
`String label, VoidCallback? onPressed`

LabeledTextField

Water (g)

200

`lib/widgets/labeled_text_field.dart`
`String label, TextEditingController controller, String? unit`

DropdownSelector

Brew type

Moka pot

`lib/widgets/dropdown_selector.dart`
`String label, List<String> options, String? selected, ValueChanged<String?> onChanged`

StrengthBadge

Strong

`lib/widgets/strength_badge.dart`
`String label`

RatioCard

200g water / 33g coffee

Strong

`lib/widgets/ratio_card.dart`
`int waterGrams, int coffeeGrams, double ratio, String strengthLabel`

GrindResultCard

18 clicks

`lib/widgets/grind_result_card.dart`
`String roasatLevel, String grinder, String clickSetting`

TimerDisplay

02:45

`lib/widgets/timer_display.dart`
`Duration currentTime, VoidCallback onStart, VoidCallback onStop, VoidCallback onReset`

RecipeListTile

Moka · Dark

Strong

`lib/widgets/recipe_list_tile.dart`
`Recipe recipe, VoidCallback onTap`

AppBar

Calc Notes Timer Settings

`lib/widgets/app_bar.dart`
`String activeRoute, ValueChanged<String> onSelect`

Component	Appears on
PrimaryButton	Home, Calculator, Roast+Grind, Timer, Notes
OutlineButton	Calculator, Timer
LabeledTextField	Calculator, Notes
DropdownSelector	Calculator (brew type), Roast+Grind (roast, grinder)
StrengthBadge	Calculator, Notes, Home (recent recipes)
RatioCard	Calculator, Notes
GrindResultCard	Roast+Grind
TimerDisplay	Timer
RecipeListTile	Notes, Home (recent recipes)
AppBar	Every screen

Step E — Theme file, assembled

```
// lib/theme.dart
import 'package:flutter/material.dart';

class AppSpacing {
  static const double xs = 4;
  static const double sm = 8;
  static const double md = 16;
  static const double lg = 24;
}

final appTheme = ThemeData(
  useMaterial3: true,
  colorScheme: ColorScheme.fromSeed(
    seedColor: const Color(0xFF6F4E37),
    brightness: Brightness.light,
  ),
  textTheme: const TextTheme(
    titleLarge: TextStyle(fontSize: 22, fontWeight: FontWeight.bold),
    bodyLarge: TextStyle(fontSize: 16, fontWeight: FontWeight.normal),
    labelSmall: TextStyle(fontSize: 12, color: Color(0xFF8A6E5C)),
  ),
  cardTheme: const CardThemeData(margin: EdgeInsets.all(AppSpacing.sm)),
  filledButtonTheme: FilledButtonThemeData(
    style: FilledButton.styleFrom(minimumSize: const Size.fromHeight(48)),
  ),
);
// light only for MVP — no darkTheme: entry yet, see Step A
```

What changed, and why

Element	Prelim said	Now says	Why it changed
Palette	6 hand-picked hex colors in a table, no <code>ColorScheme</code> object	<code>ColorScheme.fromSeed</code> from the same primary and light-only mode	m4a4 and m5a5 both used a manual <code>getColor()</code> getter with hardcoded colors like <code>Colors.red</code> and <code>Colors.blue</code> instead of pulling from a theme; turning it to a <code>ColorScheme</code> now means future screens read from <code>Theme.of(context)</code> instead of having to write hex codes or colors
Type scale	Sizes listed in a table (22/16/12), not mapped to any Flutter slot	Mapped to <code>titleLarge/bodyLarge/labelSmall</code> , used by name	The m4a4 detail screen has <code>TextStyle(fontSize: 20, fontWeight: FontWeight.bold)</code> written inline in the widget tree; every one of those is a value I would need to search for to change
Spacing	8/16/24px rule stated as prose	Same values but now as <code>AppSpacing</code> constants	Kept unchanged, the values help up fine when the mockup was painted in at these paddings — formatting change (constants vs. prose) rather than a value change
Components	Flat list of 5 components, being name, "looks like," "contains". No file paths nor parameters	10 components with file paths and named constructor parameters, split by data or callback vs. state per the m5a5 pattern	Reviewing my m5a5 code showed that splitting stuff into single-purpose files with parameters instead of having embedded states is good for code organization"
