2. Wireframes

Step A: Screen flow map

```
[Home] --"tap Start Brewing"--> [Calculator] --"tap Next"--> [Roast + Grind] --"tap Start Timer"--> [Timer] --"tap Save & Continue"--> [Notes]

[Home] --"tap Calc in nav"--> [Calculator] (standalone, no forced flow)
[Home] --"tap Notes in nav"--> [Notes] (standalone, browse mode)
[Home] --"tap Timer in nav"--> [Timer] (standalone, bare stopwatch)

[Calculator] --"tap Skip to Notes"--> [Notes] (skips Roast+Grind and Timer)

[any screen] --"tap nav bar"--> [Home]
```

First Screen and Home base – Home

Home – every screen’s nav bar will return here. Home is also where one can find recipes and how to start the actual flow. As for dead ends, there are none. Every screen will have a forward action or a way to go back to Home.

Step B: One box-sketch per screen

Screen	Layout notes	Inputs	Actions -> destination	Data shown
Home	Header, big "Start Brewing" button, row of recent recipe cards below, bottom nav	None	"Start Brewing" -> Calculator (guided), recipe card tap -> Notes detail, nav taps -> respective screen	recipe (recent 3-4)
Calculator	Header, brew type dropdown, water/coffee grams inputs, live ratio + strength label, bottom nav	Brew type, water grams, coffee grams	"Next" -> Roast + Grind, "Skip to Notes" -> Notes, nav taps -> respective screen	recipe (in progress)
Roast + Grind	Header, roast level toggle, grinder dropdown, grind setting output, bottom nav	Roast level, grinder	"Start Timer" -> Timer, nav taps -> respective screen	recipe (in progress)

Screen	Layout notes	Inputs	Actions -> destination	Data shown
Timer	Header, big digit display, start/stop/reset buttons, bottom nav	None (unless the three buttons count)	"Save & Continue" -> Notes, nav taps -> respective screen	recipe (brew time only)
Notes	Header, auto-filled summary card (ratio, grind, time) if arriving from the flow, taste notes text field, temp field, list of past recipes if arriving standalone, bottom nav	Taste notes, temperature	"Save" -> writes to recipe list, recipe tap -> detail view, nav taps -> respective screen	recipe (full, list and detail)

Step C: Sanity check

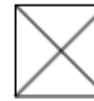

Let's say I am doing moka pot brewing. Home to the Calculator to the Roast and Grind then to the Timer then to the Notes. All the five screens and their respective actions have landing spots that match the flow map.
